## 1 REQUIREMENTS

This user guide provides instruction on how to install, update, or delete the NotifySCM iOS application.

Requirements include:

- iOS device with iOS version 9.3.5 or higher
- WiFi or 3G access
- The device must not be jailbroken

## 2 INSTALLING NOTIFYSCM

### Installation from the App Store

Tap the App Store icon on your device's Home screen and search for *NotifySCM Workspace*.

	<p>Tap <b>GET</b> or the cloud icon to download the app and begin the installation process.</p> <p>When the download is completed, the NotifySCM icon will appear on your Home screen.</p>
---	--

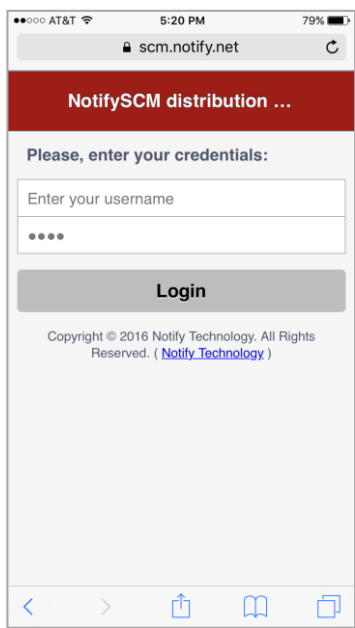

## Installation from an In-House Distribution Server

Before you begin, verify that your administrator has added your user information to the NotifySCM server.

Open the browser on your phone and navigate to the web address provided by your IT administrator.

It will look something like this: <https://yourdomain.com/sense/install>

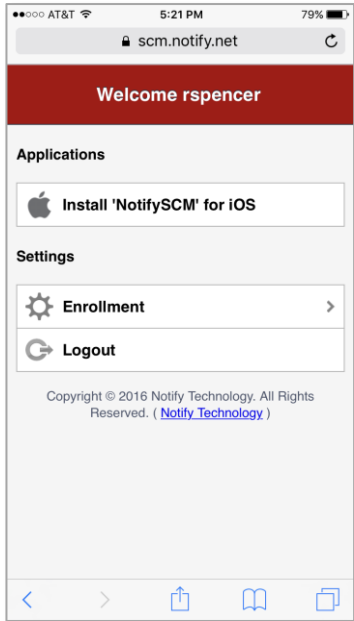

OR if using a defined port number other than 8443: <https://yourdomain.com:<port#>/sense/install>

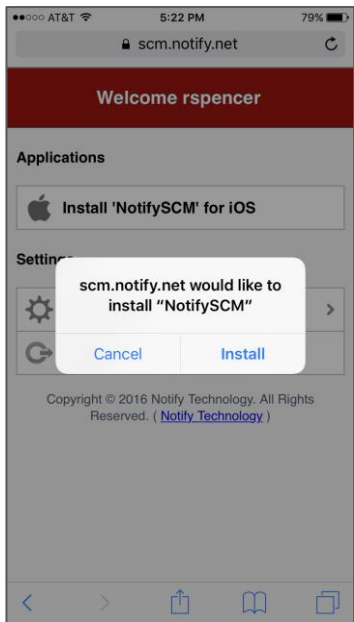

At the login screen, enter your username and password.

Tap the **Login** button.

(Note: If you are returned to the login screen, you may need to go to *Settings* and accepted or allow the cookies for your browser.)

Tap **Install 'NotifySCM'** for iOS.

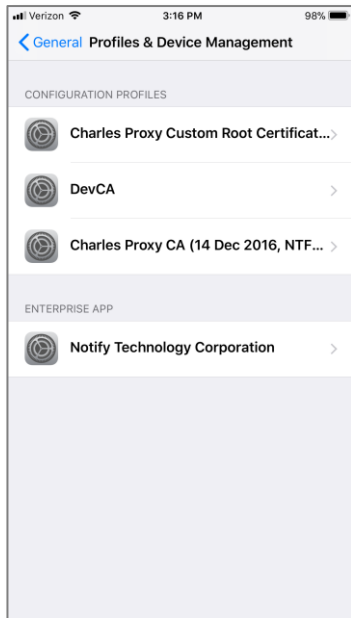

Confirm that you wish to download the application. Tap **Install**.

Once installed NotifySCM application's icon appears on the Home screen.

Tap the icon to open the application.

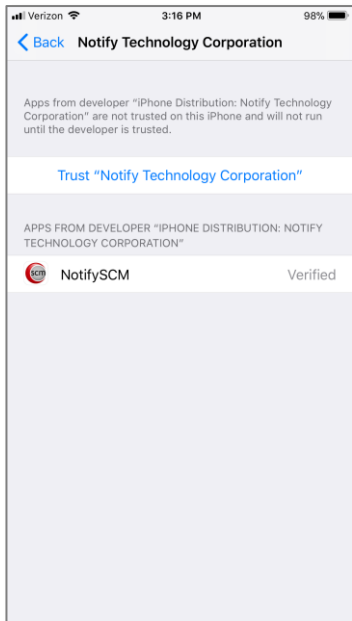

At the initial launch of the NotifySCM application, you will see a message that informs you that the application developer must be trusted before the app can be used.

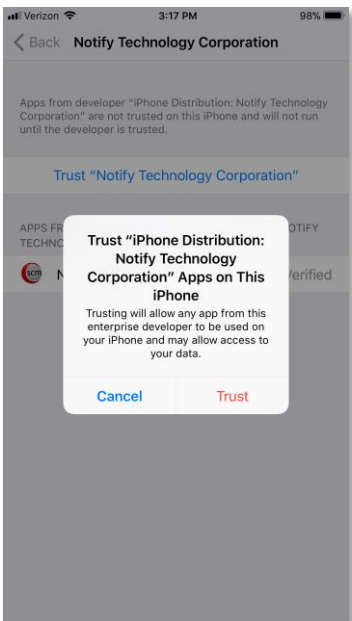

**To trust the enterprise certificate:**

Go to the device **Settings**.

Select **General > Profiles & Device Management > Notify Technology Corporation**

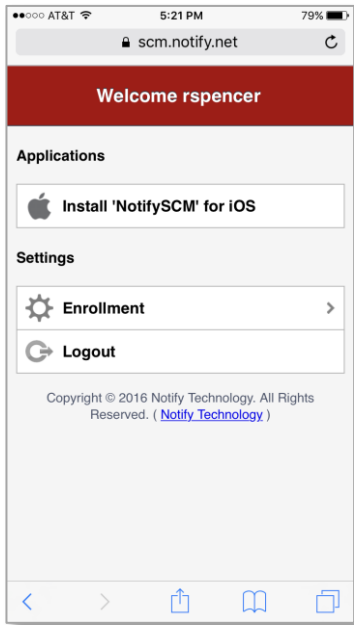

Tap **Trust Notify Technology Corporation**.

Tap **Trust** on the pop-up dialog.

### 3 ENROLLING NOTIFYSCM

#### Obtain an Enrollment Code

If you are enrolling for the first time, you will need to log into the web server to obtain your enrollment code.

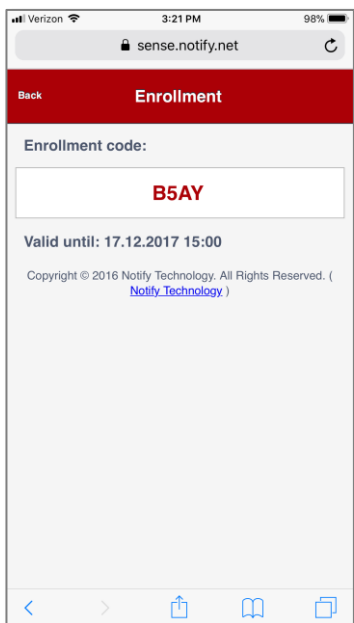

Open the browser on your phone and navigate to the web address provided by your IT administrator. It will look something like this:

<https://yourdomain.com/sense/install>

OR if using a defined port number other than 8443:

<https://yourdomain.com:<port#>/sense/install>

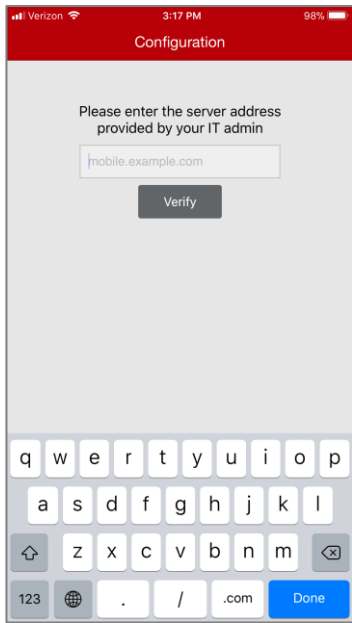

Tap **Enrollment**.

If an enrollment code is not displayed, tap the **Request code** button (if the option is given) to generate one or ask your IT administrator to generate one for you.

Copy the code or write it down so that you can enter it during the initial enrollment of the app.

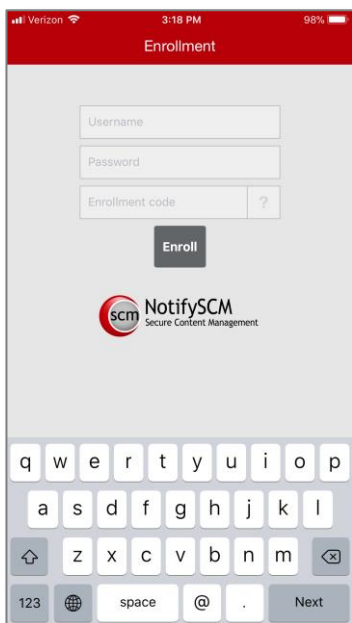

## Enroll the Application

Launch the NotifySCM application from the device Home screen.

Enter the server address provided by your IT administrator and tap **Verify**.

Example: mobile.example.com

Enter your credentials on the enrollment screen.

- **Username**
- **Password**

Paste or enter the **Enrollment code** you retrieved from the web server.

Once you have enrolled the application, launching the NotifySCM app will take you directly to a login screen where only a password is required.

#### 4 UN-ENROLLING NOTIFYSCM

Un-enrolling the application can be used as an effective troubleshooting tactic. If for any reason the user is no longer able to enroll or login, or IT administrator actions have been unsuccessful in resolving an issue, un-enrollment might provide a last resort solution.

To un-enroll the NotifySCM application:

1. Open NotifySCM.
2. Tap the wheel icon on the left side of the screen header.
3. Select **Disenroll device**.
4. Tap **OK** to confirm the un-enrollment.

When you re-open the application, you will be prompted to start the enrollment process.
